

Memphis medical monthly Volume 30, no. 9

By Tri-State Medical Association of

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1910 Excerpt: . . . the last few days, pain in the pelvis and abdomen and the tumor itself had been tender. General condition of the patient good; pulse 110, temperature 100. The tumor was situated in the right thigh, below Poupart's ligament, but a little higher than the usual location for a femoral hernia. It was tense, slightly discolored and fluctuated. No impulse on coughing. No change in size on pressure. Bimanual examination of the pelvis revealed nothing because of tenderness. Diagnosis, femoral hernia, perhaps strangulated. A transverse curved incision above Poupart's ligament revealed a hernial sac extending up under Poupart's ligament. The sac was thick, tense and filled with fluid of a sanguineous color and contained about one-third of the Fallopian tube. The tube was swollen and adherent to the sac, especially about its neck. Abdominal incision was made and the right ovary found cystic. The tube was removed...
