Original publisher: Hampton, Va. : National Aeronautics and Space Administration, Langley Research Center, 2010 OCLC Number: (OCoLC)698129825 Excerpt: . . . capabilities. ROBUS-2 tolerates internal as well as PE faults and incorporates a dynamic self-reconfiguration capability driven by the internal diagnostic system. ROBUS-2 consists of custom-designed hardware-based ROBUS Protocol Processors (RPPs) implementing the ROBUS-2 functionality, and a lower-level physical communication network consisting of full-duplex data links Stallings94 interconnecting the RPPs (see ROBUS Links in Figure 1. 1). Additional information about ROBUS-2 can be found in Torres05A and Torres05B . For completeness, Section 3 of this report provides an overview of ROBUS-2. The VHDL Armstrong93 source code for the ROBUS-2 RPP is publicly available on the Internet with an open-source license agreement R2PP . In the NASA-ODU research collaboration, the range of adverse events to be considered are those characteristic of environmental threats like high-energy particle radiation Taber93, Zhang08, Zhang09 and electromagnetic interference (EMI) from sources such as lightning and high-intensity radiated fields (HIRF) Fuller95, Gray00, Gonzlez01 . These environments have the potential to cause random fault manifestations in individual avionics components and to generate simultaneous system-wide faults that can overwhelm existing resource management mechanisms Gray08, Hess97 . A flight control system using SPIDER will be subjected to physical and simulated faults in controlled laboratory conditions Arlat89, Arlat03, Hsueh97, Torres08A while gathering data suitable for characterizing fault effects at the control system level and at the computation platform level. The CFIMS is a critical element of the research effort as the means to generate experimental data for the development and validation of performance models for operation in adverse conditions.
